

**RLA-H**  
**7/8-14 to RCBS button**  
**shell holder adapter.**

**Used in the RLA-EX ram extender, in Corbin CSP-2 Mega Mite, CSP-2H Hydro Junior, and CHP-1 Hydro-Press, for reloading.**

The Corbin RLA-H reloading shell holder adapter features a spring-loaded ball bearing detent to smoothly hold standard RCBS type shell holder buttons securely and yet allow them to be easily replaced. The T-slot fits current RCBS brand shell holders: other brands or earlier versions having different tolerances or dimensions may not fit without modification.

The RLA-H is part of the RLA-1-H reloading adapter kit which comes with each of the Corbin -H presses, and is also available as a separate package. The RLA-H screws into the RLA-EX ram extension, which also provides a primer port and the adaptation of the 7/8-14 threads to the 1-inch by 12 thread ram.

The RLA-H is similar to but not the same as the CSP-R reloading adapter for the S-Press (CSP-1). For one thing, the CSP-R has 5/8-24 threads to fit the Corbin benchrest press, and for another, the CSP-R is a combination extender, shell holder adapter, and primer port system all in one part.

**RLA-EX**  
**7/8-14 to 1.5-12 thread**  
**Ram extension, adapter, and**  
**primer port.**

**Adapts Corbin -H presses with**  
**1-12 threads to accept shell**  
**holders and shell holder adapt-**  
**ers having a 7/8-14 thread.**

The RLA-EX ram extension is also provides a primer port for use with reloading die shell holders, and ext the ram to put the shell holder clos the press head than is required for swaging. It is used with the Corbin 2 Mega-Mite, CSP-2H Hydro Junior, and the CHP-1 Hydro-press. One RLA-EX comes with each press. It is also one of the three components of the RLA-1-H reloading adapter kit, which is available separately from the press.

Applications of the RLA-EX include:

Adapts Corbin RLA-H reloading shell holder adapter to the press ram, for use with regular reloading dies and RCBS-type button shell holders.

Accepts the RLA-50-H precision 50 BMG shell holder directly. This shell holder screws into the top of the adapter for reloading 50 BMG with 1-1/2 inch by 12 thread dies.

A plastic primer catcher box with a 1-inch hole can fit under the extension adapter and ride up and down with it.
